FOR IMMEDIATE RELEASE

SOLUTION BEACON SUCCEEDS WITH 10GR2 UPGRADE AT JET PROPULSION LABORATORY

DALLAS, TX May 20, 2007- Yet another success for Solution Beacon! Although it occurred last year, it is still worth the recognition of a job well done. As of Nov 06, 2006, Solution Beacon successfully assisted Jet Propulsion Laboratory (JPL) in upgrading their database from 9.2.0.7, running Oracle Applications 11.5.10.2, to a current 10.2.0.2 release.

Solution Beacon's stellar on-site consultant was initially at JPL to assist with areas of interest around Oracle Secure Backup, OATM, standby/fail over databases and routine daily support. As a result of his dedication and commitment to JPL, he was also asked to augment the JPL Lead DBA in oversight and implementation of the 10gR2 upgrade. The upgrade ran through with barely a hitch.

JPL was established in the 1930s and is a federally funded research and development facility managed by the California Institute of Technology for the National Aeronautics and Space Administration. In addition to the Laboratory's main Pasadena site and the three Deep Space Network complexes around the world, JPL installations include an astronomical observatory at Table Mountain, California, and a launch operations site at Cape Canaveral, Florida.

Solution Beacon consultants are still involved with JPL, assisting with Single-Sign-On, Portal, bulk loads into OID and Provisioning implementations and configurations into test instances.
