FOR IMMEDIATE RELEASE

iROBOT PERFORMANCE TUNING ISSUES RESOLVED

DALLAS, TX October 30, 2007 — Solution Beacon is proud to announce the successful completion of a performance evaluation engagement at iRobot. iRobot is well underway to having their production performance issues resolved as a result of Solution Beacon's involvement.

iRobot had been experiencing severe performance degradation issues in their Oracle 11.5.9/9.2.0.4 Production environment as a result of increased users, added functionality and overall increased use of their Oracle Applications environment. These performance issues had been ongoing for several months and as a result iRobot management needed to establish solutions to quickly mitigate the performance concerns.

Accolades to our Solution Beacon consultant for getting on board quickly to determine what had already been addressed internally and then to focus the search on the areas of greatest need. We assessed their system from a holistic perspective and made recommendations regarding their current installation, configuration, and performance, as it related to their Hardware, Operating System and Oracle Applications environment. With scripts and best practices in hand, the consultant directed his attention to the sub-system bottlenecks surrounding CPU, memory and I/O and provided a detailed assessment report laying out his findings and areas for improvement for further follow-up by iRobot. Many of his recommendations brought immediate returns while others are to be implemented, by iRobot, at a later time, will bring additional performance gains.

This project would not have been successful without the participation of the iRobot personnel along with our Sales Team who worked with the iRobot team to meet their needs quickly and effectively.

About iRobot Corporation

iRobot delivers innovative robots that are making a difference in people's lives. From cleaning floors to disarming explosives, iRobot constantly strives to find better ways to tackle dull, dirty and dangerous missions—with better results. Founded in 1990 by roboticists from the Massachusetts Institute of Technology, iRobot designs behavior-based, artificially intelligent robots. Powered by iRobot's proprietary AWARE™ Robot Intelligence Systems, their robots are designed to navigate through complex and dynamic real-world situations, from maneuvering around furniture to searching abandoned buildings. The robots are highly sophisticated, yet practical and easy to use. To date, more than 2.5 million Home Robots have been sold worldwide and over 1,000 iRobot PackBot® Tactical Mobile Robots have been deployed worldwide, mostly in Iraq and Afghanistan. These robots have performed tens of thousands of missions and are credited with saving scores of soldiers' lives. iRobot has won numerous awards for innovation and design.

About Solution Beacon, LLC

Solution Beacon, LLC, is a woman-owned business and leading provider of expert-level resources for the most widely used Enterprise Management Systems and Technologies in the world. Solution Beacon consultant resources contribute their Oracle Applications expertise to government, manufacturing, distribution, telecommunications, healthcare, higher education and finance segments of the marketplace.
